# OIXIO GDPR solution for D365BC

## About solution

It is almost impossible to keep track of GDPR compliance in every IT tool your company uses.

Our solution automates reporting to authorities, while you focus on your business and important tasks.

Data protection supervisory authorities are paying increasing attention to the scope of personal data processed in companies' ERP systems and the lawfulness of the processing of such data.

OIXIO GDPR solution solves the GDPR related challenges in Dynamics 365 Business Central, by managing data subject inquiries, depersonalization of data, improving compliance with regulatory requirements.

## Solution can help your company to:

### Find personal data with ease

You can filter and find the personal data of specific data subjects and get personal data reports with single click. We enable you to link the accounts of the company's General Ledger chart of accounts with the STI chart of accounts classifier and be even more efficient!

### Manage and register inquiries

No more missed deadlines

Manage inquiries received from data subjects, supervisory authorities, or any other interested party. The tool allows you to oversee history of inquiry execution. You can see who responsible employees are, what actions were taken. What is status of inquiry and many more!

### Depersonalization wizard:

✓ Solution allows the depersonalization (encryption without the possibility of recovery) of the selected data, thus exercising the right of data subjects to request the deletion of data.

✓ The functionality of data depersonalization templates allows you to create templates for groups of data subjects (e.g., employees, customers, vendors), thus avoiding a large amount of manual work.

✓ The functionality allows you to see the full logging of depersonalization actions.
